TimeSpot® Mobile

T & A and projects in smartphones

TimeSpot® Mobile is a tool for employees who do not have access T & A terminals.

TimeSpot® Mobile is designed for the question/answer functions, which are standards of ordinary T & A terminals. Selection also of identification through the RFID tag or manual input, as in an ordinary T & A terminals. Compound can also be used as identification of the employee's worksite.

Users are those in the business who's operating mobile.
Such as salespeople, service technicians, cleaners, construction workers, staff in care, supervisors and others "On the Move".

TimeSpot® Mobile can do more.

Mobile's software is an App for Android. As an option we can provide resolved data collection for example service personnel, distributors or vendors for order reporting. Alternative to a hand-held computer for those who work in the field and where data to be provided in real time. It is possible also to download the order documents, customer data and more.

If employees are allowed to make private phone calls.

Before the private call a prefix, which means that the charge goes to the employee's home address. Formal regulated by an Employee Agreement.
